Content

- Installing eclipse on windows a bit problematic
 - 3 steps: Installing Java JDK, GCC/Mingw, Eclipse
- This video is about windows 10
 - If installing on another windows version:
 - Try first what is here
 - If doesn't work, Google your target version
- Facing installation or running error? Google it
 - Sadly several scenarios may occur

Installing on Windows: JDK

- Google “Java JDK”

Installing on Windows: JDK

- Select from downloads (in bottom)
 - X86 = 32 bit
 - X64 = 64 bit (typically nowadays)
 - Download. Make sure its name ends with **.exe**
- Download and normally install

Windows x86

Windows x64

jdk-8u261-windows-i586.exe

jdk-8u261-windows-x64.exe

Installing on Windows: MinGw/GCC

- Google “[mingw-w64](#)”
 - Or go to <https://sourceforge.net/projects/mingw-w64/> or
- Download and normally install: **C:\MinGW**
 - Mark all packages
 - Avoid paths in spaces, if any

Home / Browse / Development / Compilers / MinGW-w64 - for 32 and 64 bit Windows

MinGW-w64 - for 32 and 64 bit Windows

A complete runtime environment for gcc

Installing on Windows: Add to system environment

- Add to environment
 - Mingw & JDK
- Let's say installed at: C:\MinGW
 - Then add to path: C:\MinGW\bin
 - This is standard step
- For jdk:
 - C:\Program Files\Java\jdk_<?>\bin
- Helpful links
 - [Windows 10](#) / [Windows 7](#)
 - [Windows versions](#)
 - Video minute doing so [in case](#)

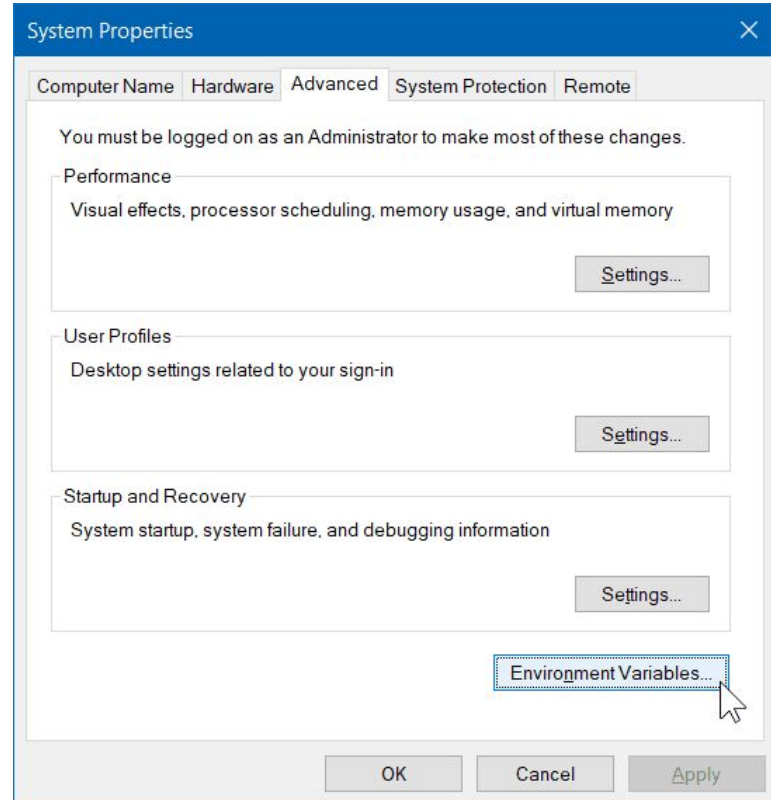

Adding path to system environment

- Borrowed [from](#)
- First, search for env

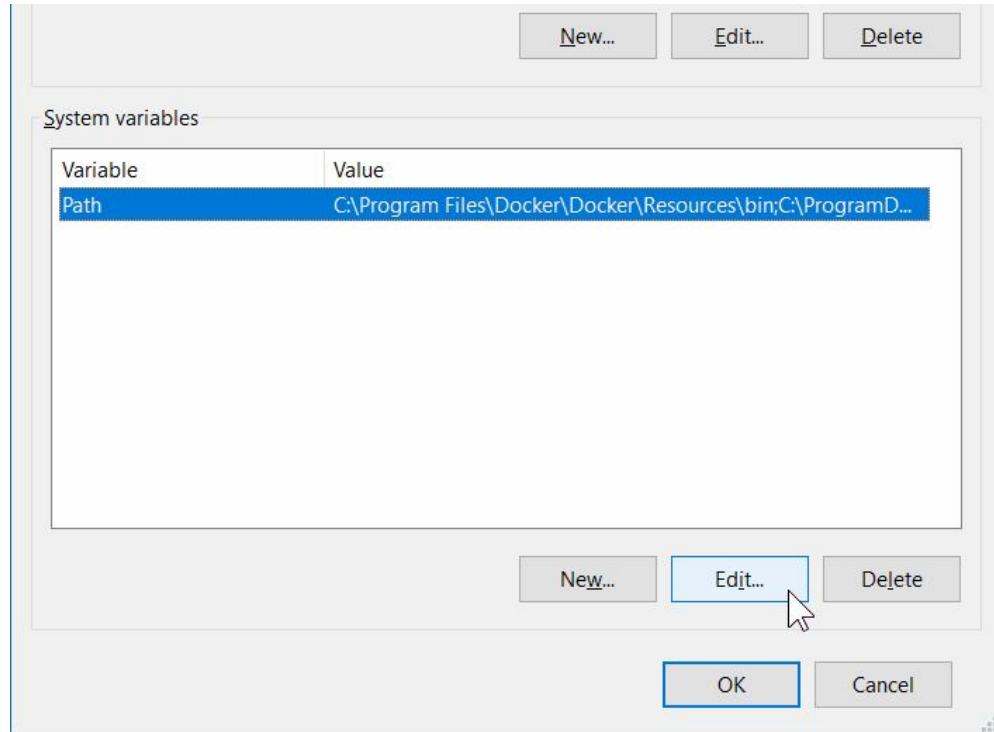

Adding path to system environment

- Click the
 - “Environment Variables...” button

Adding path to system environment

- Find **Path** in the lower part
- Edit

Adding path to system environment

- Click “New” and type in the new path you want to add
 - **Add MinGW path**
 - **Add jdk path**
- Click ok and save
- Restart your application
 - If problems:
 - 1) Double check path added
 - 2) Restart whole machine

Installing on Windows: Eclipse

- Google “[Download Eclipse IDE for C/C++ CDT Developers](#)”
 - Or go to <https://www.eclipse.org/cdt/downloads.php>
 - Download it for your OS / bits type (typically the right link generated)
 - If installer, just follow and install
 - If exe-ready to run, just double click
